Pharmaceutical Manufacturing for the 21st Century - “An Integrated Approach”

‘Leading-Class Products’ delivering ‘High-Value Solutions’ through the proven benefits of integration

6th October – Warwick Racecourse

The pharmaceutical industry is undergoing a process of profound transformation. Challenges of increasing price pressure, diminishing income levels and rising R&D costs are forcing pharmaceutical companies to rethink their strategies and business models.

However, regulatory frameworks are encouraging new ways of working so that the industry can respond to these challenges. New guidelines and innovative technologies are now enabling the pharmaceutical industry to prepare for a future of change and to profit from progress made in the area of automation and information systems to a previously unknown extent.

Siemens Totally Integrated Automation approach helps life science companies to comply with the stipulations of current Good Manufacturing Practice (cGMP) and support their continuous improvement objectives to optimise their manufacturing processes and procedures. Our seminar will demonstrate how the seamless integration of all processes enables you to benefit from high levels of efficiency, safety, quality, flexibility and compliance in your organisation.

AGENDA

09.30 Arrival and Coffee
10.00 Keynote: A Faster, Fitter Pharma – delivering integrated change
   Dean Chespy – Siemens Life Sciences Development Manager
10.20 Integrated R&D and manufacturing - closing the gap with a platform for continuous improvement
10.40 Process Automation – an integrated portfolio enabling flexible, agile and consistent manufacturing
11.00 A deeper and broader process understanding and the influence on product quality (SIPAT)
11.20 Coffee Break
11.50 Serialisation - unique product traceability through TIA
12.10 Energy – a ‘best practice’ approach to energy reduction
12.30 Lunch
13.30 Focus breakout seminar options:
   1: Optimisation of Production and Business processes - from design to delivery
      - Simatic IT (MES) delivering Electronic Batch Recording, OEE, order handling and ERP integration
      - Product Lifecycle Management (PLM) to provide integrated support for your product, process and factory development
      - Case Study: Going paperless with full Electronic Batch Recording and Release (Baxter Healthcare, Ireland).
   2: Plant Automation – achieving homogeneous shop floor integration
      - Control system software and hardware standardisation across all aspects of pharmaceutical manufacturing
      - Control system lifecycle - total cost of ownership and modernisation strategy
      - Case Study: Scaling up for vaccine manufacturing (Novartis).
   3: Environmental care and compliance
      - Solutions for particulate emissions monitoring
      - Integrated solutions to meet water and wastewater treatment requirements
      - Meeting the requirements of regulatory bodies.
15.30 Close

Answers for industry.
